

INITIATIVES

Health

We have held various health camps, in addition to conducting periodic health and hygiene education classes for children and adults. We also provide financial assistance for medical expenses.

Education

We conduct a weekly education program for children of all ages including English, education in human values, and personal development. We also provide financial aid for fees, uniforms, and books.

Sanitation

We are working to improve living conditions, sanitary facilities, water provision, and hygienic practices.

Community Empowerment

Through the use of focus group discussions, surveys and constant community participation, we wish to empower various sectors of the community. We hope to provide vocational training and financial and administrative support for entrepreneurship and economic improvement.

At Sangam India, we work with communities. We have committed ourselves to forging meaningful, lasting relationships in order to bring about real, long-term improvements, to help people to help themselves. We seek out suggestions from people in different professions, from all over the world, to help develop our programs. Teams from different countries develop plans and modules while volunteer groups within India focus on their day-to-day implementation, providing a system of constant feedback and planning.

We constantly search for groups that work near ongoing Sangam India projects. We welcome collaboration, consultation or advice, and innovative ideas.

We also welcome contributions, both financial and in kind.
